PORTABLE FORCED AIR HEATERS
“USER’S MANUAL”

MODEL: DFA-50
DFA-75T
DFA-125C
DFA-170CV
DFA-210CV

Before the first use of this heater, please read this USER’S MANUAL very carefully. This USER’S MANUAL has been designed to instruct you as to the proper manner in which to assemble the heater, maintain the heater, store the heater, and most importantly, how to operate the heater in a safe and efficient manner. Please keep this manual for future reference.

World Marketing of America, Inc.

NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!

**DANGER:** IMPROPER USE OF THIS HEATER CAN RESULT IN SERIOUS INJURY OR DEATH FROM BURNS, FIRE, EXPLOSION, ELECTRICAL SHOCK AND/OR CARBON MONOXIDE POISONING.

**WARNINGS:**

1. **RISK OF INDOOR AIR POLLUTION!**
   - Use this heater only in well ventilated areas. Provide at least a three-square foot (2,800 sq. cm.) opening of fresh outside air for each 100,000 BTU/hr. of heater rating.
   - People with breathing problems should consult a physician before using the heater.
   - **Carbon monoxide poisoning:** Early signs of carbon monoxide poisoning resemble the flu, with headaches, dizziness and/or nausea. If you have these signs, the heater may not be working properly. **Get fresh air at once!** Have the heater serviced. Some people are more affected by carbon monoxide than others. These include pregnant women, persons with heart or lung disease or anemia, those under the influence of alcohol, or those at high altitudes.
   - Never use this heater in living or sleeping areas.

2. **RISK OF BURNS/FIRE/EXPLOSION!**
   - **NEVER** use any fuel other than 1-K kerosene, #1 diesel/fuel oil in this heater.
   - **NEVER** use fuel such as gasoline, benzene, paint thinners or other oil compounds in this heater. (RISK OF FIRE OR EXPLOSION)
   - **NEVER** use this heater where flammable vapors may be present.
   - **NEVER** refill the heaters fuel tank while heater is operating or is still hot.

**CAUTION:** Hot while in operation. Do not touch. Keep children, clothing and combustibles away from heater.

Minimum Clearances:
- Outlet: 8 feet (250cm) / Sides, top and rear: 4 feet (125cm)
- **NEVER** block air inlet (rear) or air outlet (front) of heater.
- **NEVER** use duct work in front or behind of heater.
- **NEVER** move, handle, service a hot, operating or plugged in heater.
- **NEVER** transport heater with fuel in it's tank.
- When used with an optional thermostat or if equipped with a thermostat heater may start at any time.
- **ALWAYS** locate heater on a stable and level surface.
- **ALWAYS** keep children and animals away from heater.
- Bulk fuel storage should be a minimum of 25 ft. from heaters, torches, portable generators or other sources of ignition. All fuel storage should be in accordance with federal, state or local authorities having jurisdiction.

3. **RISK OF ELECTRIC SHOCK!**
   - Use only the electrical power (voltage and frequency) specified on the model plate of the heater.
   - Use only a three-prong, grounded outlet and extension cord.
   - **ALWAYS** install the heater so that it is not directly exposed to water spray, rain, dripping water or wind.
   - **ALWAYS** unplug the heater when not in use.

**PROPOSITION 65 WARNING:** Fuels used in gas, wood-burning or oil fired appliances, and the products of combustion of such fuels, contain chemicals known to the State of California to cause cancer, birth defects and other reproductive harm.

**MASSACHUSETTS RESIDENTS:** Massachusetts state law prohibits the use of this heater in any building which is used in whole or in part for human habitation. Use of this heating device in Massachusetts requires local fire dept. permit (M.E.L.C. 148, Section 10A.)

**CANADIAN RESIDENTS:** Use of this heater shall be in accordance with authorities having jurisdiction and CSA Standard B139.

**NEW YORK CITY RESIDENTS:** For use only at construction sites in accordance with applicable NYC codes under NYCFD certificate of approval # 5034 and 5037.
NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!

1. INTRODUCTION
Please read this USER’S MANUAL carefully. It will show you how to assemble, maintain, and operate the heater safely and efficiently to obtain full benefits from its many built-in features.

2. FEATURES

![Diagram of the heater's features](image)

NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!

2. ASSEMBLY
For DFA-50/70T Models only

Tools Required
- Medium Phillips Screwdriver.

Assembling Handle
1. Lift front guard for arrow direction and make sure that guard’s wedged portion fits into the slit hole on the upper housing.
2. Align the holes in the upper housing with two mounting holes on the handle as shown in Figure 6.
3. Secure handle with screws with provided.

For DFA-125C/170CV/210CV Models only

Tools Required
- Medium Phillips Screwdriver.
- 3/4 inch socket or adjustable wrench

Assembling Handle & Wheel and Cord Wrap
1. Slide threaded axle through the rear section of the wheel support frame.
2. Slide one axle bushing on to each side of the axle. Slide one wheel on to each side of the axle. Attach one cap nut on to each side of the threaded axle and tighten well.
3. Place heater on wheel support frame. Align the holes on fuel tank flange with holes on wheel support frame.
4. Position the handles on top of fuel tank flange. Insert screws through handles, fuel tank flange and wheel support frames as shown in Figure 7 and attach nut finger tight after each screw is inserted.
5. Align the hole on the handles with the mounting hole on the Cord Wrap. Insert screws through Cord Wrap, handles and attach nut finger tight after each screw is inserted. (DFA-170CV/210CV Models only)
6. After all screws are inserted, tighten nuts firmly.
NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!

4. KEROSENE (1-K)

For optimal performance of this heater, it is strongly suggested that 1-K kerosene be used. 1-K kerosene has been refined to virtually eliminate contaminants, such as sulphur. Which can cause a rotten egg odor during the operation of the heater. However, #1 diesel/fuel oil may also be used if 1-K kerosene is not available. Be advised that these fuels do not burn as clean as 1-K kerosene, and care should be taken to provide more fresh air ventilation to accommodate any added contaminants that may be added to the heated space.

KEROSENE SHOULD ONLY BE STORED IN A BLUE CONTAINER THAT IS CLEARLY MARKED “KEROSENE”, NEVER STORE KEROSENE IN A RED CONTAINER.

Red containers are associated with gasoline.

NEVER store kerosene in the living space. Kerosene should be stored in a well ventilated place outside the living area.

NEVER use any fuel other than 1-K kerosene (#1 diesel and #1 oil are acceptable substitutes)

NEVER use fuel such as gasoline, benzene, alcohol, white gas, camp stove fuel, paint thinners, or other oil compounds in this heater. These are volatile fuels that can cause an explosion or uncontrolled flames.

NEVER store kerosene in direct sunlight or near a source of heat.

NEVER use kerosene that has been stored from one season to the next. Kerosene deteriorates over time. “OLD KEROSENE” WILL NOT BURN PROPERLY IN THIS HEATER.
5. OVERVIEW OF HEATERS DESIGN

**Fuel System:** This heater is equipped with an electric air pump that forces air through the air line connected to the fuel intake and then through a nozzle in the burner head. When the air passes in front of the fuel intake it causes fuel to rise from the tank and into the burner nozzle. This fuel and air mixture is then sprayed into the combustion chamber in a fine mist.

“Sure Fire Ignition”: The electronic ignitor sends voltage to a specially designed spark plug. The spark plug ignites the fuel and air mixture described above.

**The Air System:** The heavy duty motor turns a fan that forces air into and around the combustion chamber. Here the air is heated and then forced out the front of the heater.

**The Safety System:**

A. **Temperature Limit Control:** This heater is equipped with a Temperature Limit Control designed to turn off the heater should the internal temperature rise to an unsafe level. If this device activates and turns your heater off it may require service.

<table>
<thead>
<tr>
<th>MODELS</th>
<th>Internal Shut-Off Temp. Plus/Minus 10 Degrees</th>
<th>Reset Temperature Plus/Minus 10 Degrees</th>
</tr>
</thead>
<tbody>
<tr>
<td>DFA-50 / DFA-75T</td>
<td>176°F/80°C</td>
<td>122°F/50°C</td>
</tr>
<tr>
<td>DFA-125C/DFA-170CV</td>
<td>230°F/110°C</td>
<td>194°F/90°C</td>
</tr>
<tr>
<td>DFA-210CV</td>
<td>194°F/90°C</td>
<td>140°F/60°C</td>
</tr>
</tbody>
</table>

Once the temperature falls below the reset temperature you will be able to start your heater.

B. **Electrical System Protection:** This heaters electrical system is protected by a fuse mounted to the PCB assembly that protects it and other electrical components from damage. If your heater fails to operate check this fuse first and replace as needed.

**FUSE TYPE:** All Models 125 volt / 8 amps

C. **Flame-Out Sensor:** Utilizes a photocell to monitor the flame in burn chamber during normal operation. It will cause the heater to shut-off should the burner flame extinguish.

NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!
6. FUELING YOUR HEATER

NEVER FILL THE HEATER FUEL TANK IN THE LIVING SPACE: FILL THE TANK OUTDOORS.
DO NOT OVERFILL YOUR HEATER AND BE SURE HEATER IS LEVELED.

IMPORTANT NOTICE REGARDING FIRST IGNITION OF HEATER:
The first time you light the heater, it should be done outdoors. This allows the oils, etc. used in manufacturing the heater to burn off outside.

WARNING!!: NEVER REFILL HEATER FUEL TANK WHEN HEATER IS OPERATING OR STILL HOT.

7. OPERATION

A.) VENTILATION

RISK OF INDOOR AIR POLLUTION/USE HEATER ONLY IN WELL VENTILATED AREAS.
Provide a fresh air opening of at least three square feet (2,800 sq. cm) for each 100,000 BTU/Hr. rating. Provide extra fresh air if more heaters are being used.

Example: A DFA-210CV heater requires one of the following:
• a two-car garage door raised six inches (15.24 cm)
• a single-car garage door raised nine inches (22.86 cm)
• two, thirty-inch (76.20 cm) windows raised fifteen inches (38.1 cm)

B.) OPERATION

TO START HEATER
1. Fill fuel tank with kerosene or No. 1 fuel oil.
2. Attach fuel cap.
3. Plug power cord of heater into three-prong, grounded extension cord. Extension cord must be at least six feet long. Extension Cord Wire Size Requirements
   • 6 to 10 feet (1.8 to 3 meters) long, use 18 AWG conductor.
   • 11 to 100 feet (3.4 to 30.5 meters) long, use 16 AWG conductor.
   • 101 to 200 feet (30.8 to 61 meters) long, use 14 AWG conductor.
4. Turn “THERMOSTAT CONTROL Knob” to desired setting (Setting range: 40˚F ~ 110˚F)
   (DFA-75T/DFA-125C/DFA-170CV/DFA-210CV Models Only)
5. Push “BTU control Switch” to desired level “High or LOW” (DFA-170CV/DFA-210CV Models only, See Figure 8).
6. Push Power Switch to “ON” position, Power Indicator Lamp will light and heater will start.

NOTE: Room Temperature display explanations are as follows: (DFA-125C/DFA-170CV/210CV Models only)

When the room temperature is less 0˚F, the LED display will show “Lo”
When room temp is between 0˚F and 99˚F, the number shown on the display is the current room temperature.
When room temperature is greater than 99˚F, the LED display will show “Hi”
If heater does not start, the thermostat setting may be too low, turn “thermostat Control Knob” to higher position to start heater. If heater still does not start, turn power switch to “OFF” and then to “ON” position. If heater still does not start, see Troubleshooting Guide on page15.

NOTE: User can Select to operate the heater on two different BTU levels (High or Low). The BTU level can be selected before turning the unit on, or while it is in operation by pushing the BTU control switch.
NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!

NOTICE: The major electrical components of this heater are protected by a safety fuse mounted to the PCB board. If your heater fails to start, check this fuse first and replace as necessary. You should also check your power source to insure that proper voltage and frequency are being supplied to the heater.

TO STOP HEATER
1. Turn switch to “OFF” and unplug power cord.

TO RESTART HEATER
1. Wait 10 seconds after stopping heater.
2. Repeat steps under to start heater.

EXTRA ELECTRIC OUTLET & PIGGYBACK POWER CORD

WARNING: SHOCK HAZARD!
- Always cover electric outlet when not in use.
- Don’t plug and use a appliance more than 120V/60Hz 5A current in this outlet

![Electric Outlet](image)

Figure 9. Electric Outlet

8. LONG TERM STORAGE OF YOUR HEATER

FUEL TANK DRAIN
1. Drain fuel tank through fuel cap opening. (For DFA-50/DFA-75T Models Only)
2. Remove fuel drain bolt from rear bottom side of fuel tank using 3/4” socket or adjustable wrench and drain. (For DFA-125C/DFA-170CV/DFA-210CV Models Only. See Figure 10)
3. Using a small amount of kerosene, swirl and rinse the inside of the tank. NEVER mix water with the kerosene as it will cause rust inside the tank.
   Pour the kerosene out making sure that you remove it all.
   IMPORTANT: Do not store kerosene over summer months for use during next heating season. Using old fuel could damage heater.
4. Reinstall fuel cap. Properly dispose of old and dirty fuel. (For DFA-50/DFA-75T Models Only)
5. Reinstall Fuel Drain Bolt to Fuel tank and tighten firmly using 3/4” socket or adjustable wrench. (For DFA-125C/DFA-170CV/DFA-210CV Models Only. See Figure 10)
   IMPORTANT: Before reinstalling the fuel drain bolt, make sure the seal is on the bolt. If the seal is not used the bolt cannot be installed correctly and the fuel tank will leak.

![Drain Bolt](image)

Figure 10. Drain Bolt

6. Store heater in dry well ventilated area. Make sure storage place is free of dust and corrosive fumes.
7. Store the heater in the original box with the original packing material and keep the USER’S MANUAL with the heater.
NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!

9. MAINTENANCE

**WARNING!! : NEVER SERVICE HEATER WHILE IT IS PLUGGED IN OR WHILE HOT!**

USE ORIGINAL EQUIPMENT REPLACEMENT PARTS. Use of third party or other alternate components will void warranty and may cause unsafe operating conditions.

A.) FUEL TANK
FLUSH EVERY 200 HOURS OF OPERATION OR AS NEEDED (SEE STORAGE, PAGE 9)

B.) AIR INTAKE FILTER
WASH AND DRY WITH SOAP AND WATER EVERY 500 HOURS OF OPERATION OR AS NEEDED.
- Remove screws along each side of heater using medium Phillips screwdriver.
- Lift upper shell off.
- Remove fan guard.
- Wash or replace air intake filter.
- Reinstall fan guard and upper shell.

C.) AIR OUTPUT FILTER, LINT FILTER
REPLACE EVERY 500 HOURS OF OPERATION OR ONCE A YEAR.
- Remove upper shell and fan guard (See Air Intake Filter).
- Turn Air pressure gauge counter-clock wise and remove.
- Remove end filter cover screws using medium Phillips screwdriver.
- Remove end filter cover.
- Replace air output and lint filter.
- Reinstall end filter cover and air pressure gauge.
- Reinstall fan guard and upper shell.

D.) FAN BLADES
CLEAN EVERY SEASON OR AS NEEDED.
- Remove upper shell (See Air Intake Filter).
- Use M6 Allen wrench to loosen set screw which holds fan blade to motor shaft.
- Slip fan blade off motor shaft.
- Clean fan blade using a soft cloth moistened with kerosene or solvent.
- Dry fan blade thoroughly.
- Reinstall fan blade on motor shaft. Place fan blade hub flush with end of motor shaft.
- Place set screw on flat of shaft. Tighten set screw firmly (40-50 inch-pounds/4.5-5.6 N-m).
- Reinstall upper shell.

![Figure 11. Air Intake Filter Access](image1)

![Figure 12. Air Output Filter Access](image2)

![Figure 13. Fan Assembly](image3)
E.) NOZZLE

REMOVE DIRT IN NOZZLE AS NEEDED (SEE PAGE 16).
(For DFA-50/75T/125C/170CV Models Only)
- Remove upper shell (See page 10).
- Remove fan blade (See page 10).
- Remove fuel and air line hoses from burner head.
- Remove ignition wire from spark plug.
- Remove three screws using medium Phillips screwdriver and remove burner head from combustion chamber.
- Remove spark plug from burner head using medium Phillips screwdriver.
- Carefully remove nozzle from burner head using 5/8” socket wrench.
- Blow compressed air through face of nozzle. (this will remove any dirt in nozzle)
- Reinstall nozzle into burner head and tighten firmly.
(80~110 inch-pounds)
- Reinstall spark plug in burner head.
- Attach burner head to combustion chamber.
- Attach ignition wire to spark plug.
- Attach fuel and air line hoses to burner head.
- Reinstall fan blade and upper shell.
(For DFA-210CV Model Only)
- Remove upper shell (See page 10).
- Remove fan (See page 10).
- Remove fuel and air line hoses from adaptor-nozzle.
- Remove ignition wire from spark plug.
- Remove four screws using medium Phillips screwdriver and remove burner-bracket from combustion chamber.
- Remove spark plug from burner head using medium Phillips screwdriver.
- Carefully remove nozzle from adaptor-nozzle using 5/8” socket wrench.
- Blow compressed air through face of nozzle. (this will remove any dirt in nozzle)
- Reinstall nozzle into adaptor-nozzle and tighten firmly.
(80~110 inch-pounds)
- Reinstall spark plug in spark-bracket.
- Attach burner-bracket to combustion chamber.
- Attach ignition wire to spark plug.
- Attach fuel and air line hoses to adaptor-nozzle.
- Reinstall fan blade and upper shell.
F.) SPARK PLUG
CLEAN AND REGAP EVERY 600 HOURS OPERATION OR REPLACE AS NEEDED.
(For DFA-50/75T/125C/170CV Models Only)
- Remove upper shell (See page 10).
- Remove fan (See page 10).
- Remove ignition wire from spark plug.
- Remove spark plug from burner head using medium phillips screwdriver.
- Clean and regap spark plug electrodes to 3.5mm gap.
- Reinstall spark plug in burner head.
- Attach ignition wire to spark plug.
- Reinstall fan and upper shell.
(For DFA-210CV Model Only)
- Remove upper shell (See page 10).
- Remove fan (See page 10).
- Remove ignition wire from spark plug.
- Remove spark plug from spark-bracket using medium phillips screwdriver.
- Clean and regap spark plug electrodes to 3.5mm gap.
  (0.138”)
- Reinstall spark plug in spark-bracket.
- Attach ignition wire to spark plug.
- Reinstall fan and upper shell.

G.) PHOTOCELL
CLEAN PHOTOCELL ANNUALLY OR AS NEEDED.
- Remove upper shell (See page 10).
- Remove fan (See page 10).
- Remove photocell from it’s mounting.
  Clean photocell lens with cotton swab.
TO REPLACE:
- Remove side cover screws using medium phillips screwdriver.
- Disconnect switch wires from power switch and remove side cover.
- Disconnect wires from circuit board and remove photocell.
- Install new photocell and connect wires to circuit board.
- Replace switch wires to power switch and side cover.
- Replace fan and upper shell.
H.) FUEL FILTER
CLEAN OR REPLACE TWICE A HEATING SEASON OR AS NEED.
- Remove side cover screws using medium phillips screwdriver.
- Disconnect switch wires from power switch and remove side cover.
- Pull fuel line off fuel filter neck.
- Turn fuel filter 90° to counter clockwise and pull to remove. (DFA-50/75T Models only)
- Turn fuel filter 90° to clockwise and pull to remove (DFA-125C/170CV/210CV Models only).
- Wash fuel filter with clean fuel and replace in tank.
- Attach fuel line to fuel filter neck.
- Replace switch wires to power switch.
- Reinstall side cover.

I.) PUMP PRESSURE ADJUSTMENT
NOTE: If the pump pressure needs to be adjusted, make sure the heater is running on the HIGH BTU setting.
- Push the BTU CONTROL Switch to HIGH. (See Operation, page 8, DFA-170CV/210CV Models only)
- Remove Pressure Gauge Plug from End Filter Cover.
- Install accessory Pressure Gauge. (DFA-50/75T/125C Models only)
- Start heater (See Operation, page 8)
- Allow motor to reach full speed
- Adjust pressure (Using a flat blade screwdriver) Turn relief valve to clockwise to increase pressure. Turn relief valve to counter clockwise to decrease pressure.
- Stop heater (See Operation, page 8)

NOTE: USE ONLY ORIGINAL EQUIPMENT REPLACEMENT PARTS.
Use of alternate or third party components will void any warranty and may cause unsafe operating condition.
NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!

10. REPLACING FUSE

NOTICE : This heater is fuse protected.
If your heater fails to ignite, **DO NOT RETURN YOUR HEATER TO THE STORE.**
Please follow the simple instruction below to inspect and change the fuse.

**PROCEDURE FOR REPLACING FUSE**

⚠️ **WARNING : SHOCK HAZARD**
To prevent personal injury, unplug the power cord before replacing fuse.

1. Unplug heater.
2. Remove side cover screws using medium phillips screw driver.
3. Disconnect switch wires from power switch.
4. Remove fuse from fuse holder.(See Figure 21.)
5. Replace fuse with enclosed fuse.

⚠️ **WARNING : FIRE HAZARD**
To avoid fire, Do not substitute with a higher or lower current rating.

6. Replace switch wires to power switch.
7. Replace side cover.

**NOTE : Specified fuse rating : AC 125/8A**

![Figure 21. Replacing Fuse](image)
### Troubleshooting Guide

#### Trouble: Heater ignites but MAIN PCB assembly shuts heater off after a short period of time. (Indicator Lamp is flickering and room temp. display indicates "E1")
- **Possible Cause:**
  1. Wrong pump pressure
  2. Dirty Air Output, Air Intake or Lint Filter.
  4. Dirt in Nozzle.
  5. Dirty Photocell Lens.
  6. Photocell Assembly not properly installed (not seeing the flame).
  7. Bad electrical connection between photocell and MAIN PCB assembly.
  8. Defective Photocell.
- **Corrective Action:**
  2. See Air Output, Air intake and Lint Filters, page 10.
  4. See Nozzle, Page 11.
  6. Make sure photocell boot is properly seated in bracket, Page 12.
  7. Check electrical components See wiring diagram, Page 16.
  8. Replace Photocell, Page 12.

#### Trouble: Heater will not ignite but motor runs for a short period of time. (Indicator Lamp is flickering and room temp. display indicates "E1")
- **Possible Cause:**
  1. No fuel in tank.
  2. Wrong pump pressure.
  3. Carbon deposits on spark plug and/or improper gap.
  4. Dirty fuel filter.
  5. Dirt in Nozzle.
  7. Bad electrical connection between ignitor and MAIN PCB assembly.
  8. Ignition wire is not attached to spark plug.
- **Corrective Action:**
  1. Fill tank with kerosene.
  5. See Nozzle, Page 11.
  7. Check electrical components See wiring diagram, Page 16.

#### Trouble: Fan does not turn when heater is plugged in and power switch was in the "ON" Position. (Indicator Lamp is on or flickering)
- **Possible Cause:**
  1. Thermostat setting is too low.
  2. Bad electrical connection between motor and MAIN PCB assembly.
- **Corrective Action:**
  1. Turn thermostat control knob to a higher setting.
  2. Check electrical connections, See Wiring Diagram, Page 16.

#### Trouble: (Indicator Lamp is flickering and room temp. display indicates "E2")
- **Possible Cause:**
  1. Room Temp. sensor disconnected.
  2. Sensor Failure.
- **Corrective Action:**
  1. Reconnect sensor.
  2. Replace sensor.
  3. Replace switch.
  4. See Wiring diagram, Page 16.

#### Trouble: (Indicator Lamp is flickering and room temp. display indicates "E3")
- **Possible Cause:**
  1. Thermostat switch failure.
- **Corrective Action:**
  1. See Wiring diagram, Page 16.
  2. Replace switch.
  3. Replace safety fuse in PCB board.
  4. Check electrical connections See Wiring Diagram, Page 16.

#### Trouble: Heater will not turn-on (Indicator Lamp is off)
- **Possible Cause:**
  1. Temperature limit safety device is overheated.
  2. No electrical power
  4. Bad electrical connection between temperature limit safety device and PCB board.
- **Corrective Action:**
  1. Turn power switch to "OFF" and allow to cool (about 10 min.)
  2. Check to insure heater cord and extension cord are plugged in. Check power supply.
  3. Replace safety fuse in PCB board.
  4. Check electrical connections See Wiring Diagram, Page 16.
NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!

12. WIRING DIAGRAM

A) WIRING DIAGRAM (DFA-50 Model)

B) WIRING DIAGRAM (DFA-75T/125C/170CV Models)

C) WIRING DIAGRAM (DFA-210CV Model)
13. SPECIFICATIONS

**NEVER LEAVE THE HEATER UNATTENDED WHILE BURNING!**

**DFA-50 / DFA-75T Models**

**DFA-125C / DFA-170CV / DFA-210CV Models**
